Detergent Properties and Applications. The key to detergent function is an amphipathic structure. All detergents are characterized as containing a hydrophilic "head" region and a hydrophobic "tail" region (see Figure 1).

Mass spectrometry (MS) is an analytical technique that ionizes chemical species and sorts the ions based on their mass-to-charge ratio. In simpler terms, a mass spectrum measures the masses within a sample. Mass spectrometry is used in many different fields and is applied to pure samples as well as complex mixtures.

Chirality / k aÉ^ Ē^ r Ā! | É^ t i / is a geometric property of some molecules and ions. A chiral molecule/ion is non-superposable on its mirror image. The presence of an asymmetric carbon center is one of several structural features that induce chirality in organic and inorganic molecules. The term chirality is derived from the Ancient Greek word for hand, ἡ χείρ (kheir).

The "compound" which is set to become the drug molecule undergoes safety tests and a series of experiments to prove that it is absorbed in the blood stream, distributed to proper site of action in the body, metabolized sufficiently and demonstrates its non-toxicity thus, can be considered safe and successful.

Sometimes I get interesting questions that don't quite fit into any of the existing topics already discussed within the blog and my obsessive/compulsive nature tells me that getting this questions in a random part/page/post of the blog doesn't look quite neat either.
