A compiler implements a formal transformation from a high-level source program to a low-level target program. Compiler design can define an end to end solution or tackle a defined subset that interfaces with other compilation tools e.g. preprocessors, assemblers, linkers.

I think Modern Compiler Implementation in ML is the best introductory compiler writing text. There's a Java version and a C version too, either of which might be more accessible given your languages background. The book packs a lot of useful basic material (scanning and parsing, semantic analysis, activation records, instruction selection, RISC and x86 native code generation) and various ...

Static analysis tools are generally used by developers as part of the development and component testing process. The key aspect is that the code (or other artefact) is not executed or run but the tool itself is executed, and the source code we are interested in is the input data to the tool.

Introduction; Delphi is one of the best programming tools to create software for Windows.. With Delphi you can without much effort create small yet powerful Windows applications, which do not need to be installed, do not depend on Active X controls, or special dlls.

In computing, just-in-time (JIT) compilation, (also dynamic translation or run-time compilation), is a way of executing computer code that involves compilation during execution of a program "at run time" rather than prior to execution. Most often, this consists of source code or more commonly bytecode translation to machine code, which is then executed directly.

Book Description. In the early days of computer science, the interactions of hardware, software, compilers, and operating system were simple enough to allow students to see an overall picture of how computers worked.

My research focus on design and implementation of programming abstractions in areas that have included real-time embedded systems, concurrent and distributed systems and more recently scalable data analytics.. I have published in venues that specialize in Programming Languages, Virtual Machines, Compilers, Software Engineering, Real-time Computing, and Bioinformatics.
