AP Biology Fall Essay Review 8. A biologist tested the effects of different NaCl concentrations on diffusion rate. In the experiment, four solutions of NaCl (0%, 1.0%, 5.0%, and 10.0%) were tested under identical

AP Biology Fall Essay Review - jdenuno

2) In Metaphase I, the homologous pairs of chromosomes line up randomly across the equator of the cell, so each daughter cell will get a random mixture of "mother" and "father" chromosomes. This is known as "independent assortment" and is the second cause of variation.

Mendelian inheritance is a type of biological inheritance that follows the laws originally proposed by Gregor Mendel in 1865 and 1866 and re-discovered in 1900. These laws were initially controversial. When Mendel's theories were integrated with the Boveri-Sutton chromosome theory of inheritance by Thomas Hunt Morgan in 1915, they became the core of classical genetics.

Mendelian inheritance - Wikipedia

A quantitative trait locus (QTL) is a locus (section of DNA) which correlates with variation of a quantitative trait in the phenotype of a population of organisms. QTLs are mapped by identifying which molecular markers (such as SNPs or AFLPs) correlate with an observed trait. This is often an early step in identifying and sequencing the actual genes that cause the trait variation.

Quantitative trait locus - Wikipedia

Choose AQA for GCSE and A-level Biology. AQA A-level Biology has been designed to naturally progress from GCSE and take recognisable topics a stage further.
