Linear programming (LP, also called linear optimization) is a method to achieve the best outcome (such as maximum profit or lowest cost) in a mathematical model whose requirements are represented by linear relationships. Linear programming is a special case of mathematical programming (also known as mathematical optimization).. More formally, linear programming is a technique for the ...

In mathematics, the relaxation of a (mixed) integer linear program is the problem that arises by removing the integrality constraint of each variable.. For example, in a 0-1 integer program, all constraints are of the form $\hat{a}^T \{x\}$. The relaxation of the original integer program instead uses a collection of linear constraints $\hat{a}^T x \leq \hat{b}$. The resulting relaxation is a linear program, hence the name.

I have a bibtex database of optimization references (900K) available online. These are mostly interior point references. A searchable version of this bibliography is also available. I also have an unorganized list of announcements of computational packages that are available for solving a variety of problems. This page is not updated often enough, so some of the links are no longer functional.

Phase-Locked Loops for High-Frequency Receivers and Transmitters - Part 2. by Mike Curtin and Paul O'Brien Download PDF The first part of this series of articles introduced the basic concepts of phase-locked loops (PLLs). The PLL architecture and principle of operation was described and accompanied by an example of where a PLL might be used in a communication system.
