Spatial Data Analysis and Modeling with R. This website provides materials to learn about spatial data analysis and modeling with R. R is a widely used programming language and software environment for data analysis and graphics. R also has advanced capabilities for dealing with spatial, and spatio-temporal, data; and it provides unparalleled opportunities for analyzing such data.

Latent growth modeling is a statistical technique used in the structural equation modeling (SEM) framework to estimate growth trajectory. It is a longitudinal analysis technique to estimate growth over a period of time. It is widely used in the field of behavioral science, education and social science.

Business process modeling (BPM) in business process management and systems engineering is the activity of representing processes of an enterprise, so that the current process may be analysed, improved, and automated. BPM is typically performed by business analysts, who provide expertise in the modeling discipline; by subject matter experts, who have specialized knowledge of the processes being ...

In this course, you participate in an immersive, simulated case study, providing you with the business modeling skills necessary to produce Enterprise Architectures, Business Cases, Business Requirements and Software Requirements documents. You learn to apply analysis and modeling techniques such as Business Process Model and Notation (BPMN) to describe business workflows.

Deterministic modeling process is presented in the context of linear programs (LP). LP models are easy to solve computationally and have a wide range of applications in diverse fields. This site provides solution algorithms and the needed sensitivity analysis since the solution to a practical problem is not complete with the mere determination of the optimal solution.
