A laser is a device that emits light through a process of optical amplification based on the stimulated emission of electromagnetic radiation. The term "laser" originated as an acronym for "light amplification by stimulated emission of radiation". The first laser was built in 1960 by Theodore H. Maiman at Hughes Research Laboratories, based on theoretical work by Charles Hard Townes and Arthur ...

Electroplating is a process that uses an electric current to reduce dissolved metal cations so that they form a thin coherent metal coating on an electrode. The term is also used for electrical oxidation of anions on to a solid substrate, as in the formation of silver chloride on silver wire to make silver/silver-chloride electrodes. Electroplating is primarily used to change the surface ...

02 Market and Industry Trends. Relatively inflexible baseload generators, such as coal and nuclear power plants, have always been complemented by FLEXIBLE GENERATION to adapt the electricity supply to time-variable demand. Hydropower and other dispatchable renewables such as bio-power, and concentrating solar thermal power (CSP) with thermal storage offer flexible renewable energy generation ...
