So my goal here is to have a single search field in an application that will be able to search multiple tables and return results. For example, two of these tables are "performers" and "venues" and

Possible to search multiple tables with a single query

Views are a valuable tool for the SQL Server Developer, because they hide complexity and allow for a readable style of SQL expression. They aren't there for reasons of performance, and so indexed views are designed to remedy this shortcoming. They're great in certain circumstances but they represent a trade-off, and they come with considerable 'small print'.
